

ARYAN VALVI

Full Stack Developer

+91-7045055721 | aryanvalvi323@gmail.com | linkedin.com/in/aryan-valvi | aryanvalvi.in

Summary

Full Stack Developer (React, TypeScript, Node.js, PostgreSQL) shipping production software end-to-end, from UI/UX and REST APIs to DevOps and deployment. Sole developer of the **licensing platform** protecting the company's 3 commercial products, live with **100+ customers**. Also built product UI/UX, authentication, and Electron desktop apps, and own CI/CD and Linux/Docker deployment across projects.

Skills

Frontend: JavaScript, TypeScript, React, Next.js, Redux, Tailwind CSS, Electron.js, Figma

Backend: Node.js, Express.js, REST APIs, JWT, Prisma ORM, Redis, Socket.io, Multer, Razorpay

Databases: PostgreSQL (indexing, query optimisation), MongoDB, Redis

Media & Security: FFmpeg (video encoding, PNG frame pipelines), SHA hashing, machine-code fingerprinting, software licensing

DevOps & Infrastructure: Docker, GitHub Actions (CI/CD), Nginx, VPS, SSL/TLS, Linux, Bash

Languages: JavaScript, TypeScript, Java

Experience

Full Stack Developer

July 2025 – Present

BlueStone Tech Labs Pvt Ltd

Mumbai, India

- **Licensing platform — sole developer, in production:** Designed and built the licensing system for the company's **3 main products** (products valued at **INR 1L+**), now serving **100+ customers**. Admin dashboard (React, Node.js/Express, PostgreSQL, Prisma) to issue, install, store, update, and block licences, backed by web APIs and **concurrent-session enforcement**.
- **LAN licensing server:** Built an on-premise licence server that binds each licence to a **machine code** hashed with **SHA**, with protections against system-clock rollback, machine cloning, licence sharing across machines, and other tampering or bypass attempts.
- **TiaraRender (3DM/STL jewellery renderer, web → Electron desktop):** Owned the complete **UI/UX** of the app and developed the **Electron.js** desktop build. Built the backend auth and integrated it with the licensing system.
- **Render and export pipeline:** Implemented media export up to **4K** and rendering at **4K/60fps** using **FFmpeg**: frames are rendered pixel-by-pixel, written as PNG, and encoded to video.
- **Custom e-commerce platform (client project, solo build):** Delivered a custom-designed jewellery store from frontend to backend: React + TypeScript storefront, Node.js/Express API, PostgreSQL with Prisma, **Redis**, **Razorpay** payments, order management, CRM, and an admin dashboard with inventory management. Handled schema design through deployment.
- **Infrastructure and migration:** Set up the company's CI/CD with **GitHub Actions**, **Docker**, **Nginx**, **SSL/TLS**, and **Linux**, covering all deployments from dev to production. Migrated the company website from **WordPress** to **React + TypeScript**, keeping the existing UI identical while moving to a component-driven codebase.

Personal Projects

The Platform | *Next.js, Express.js, MongoDB, TypeScript, Cloudinary, Nginx*

- Content-sharing platform for designers to upload and showcase UI/UX designs, artwork, and video, with multi-level access control and authentication. Deployed on a private VPS behind Nginx with HTTPS.

Convexel | *Next.js, Express.js, PostgreSQL, Prisma, Socket.io, JWT, Docker*

- Real-time chat app with one-to-one and group conversations, online/typing indicators, and JWT auth over Socket.io. Fully Dockerised and deployed on a VPS with Nginx.

Education

B.E. in Computer Engineering

Atharva College of Engineering, Mumbai

2021 – 2025

CGPA: 8.4 / 10
